

## **POWER SUPPLY AUDIO ALARM CONTROL SYSTEM**

### **Abstract of the Disclosure**

Methods and systems are provided for controlling the enabling and/or disabling of an audio alarm that indicates an occurrence of a predetermined event of a power supply, such as an uninterruptible power supply (UPS). In one embodiment of the invention, the method includes programming the UPS to enable the audio alarm of the power supply  
5 during a first predetermined time period, and programming the UPS to disable the audio alarm of the power supply while the power supply is still operational during a second predetermined time period. In embodiments of the invention, the system is able to enable and disable an audio alarm during specified time periods of the day. Thus, a user can use the system to designate when an alarm will not sound so as not to disturb the user or  
10 others at an inconvenient time.
